Mobile Anesthesiologists Announces National Expansion

Partnering with Local Anesthesiologists Seeking to Capitalize on the Growing Trend of Office-based and Ambulatory Surgery

Chicago – March 26, 2007 - Mobile Anesthesiologists Holding, LLC (Mobile) is pleased to announce that it has commenced the first phase of its planned national expansion with the formation of Mobile Anesthesiologists of Michigan, LLC. The new office was opened in Grand Rapids, Michigan on March 15, 2007 and will be the first to offer accredited, physician provided, office-based anesthesia to the Michigan market.

Mobile of Michigan was formed as a partnership with local Michigan anesthesiologist Dr. Nancy Villalobos. Dr. Villalobos has over 18 years of experience in the Michigan market. Mobile's model for expansion is to partner with highly respected, board certified anesthesiologists seeking to capitalize on the office-based surgery trend on a local level. Mobile provides more than a decade of operational experience and intellectual property unique to the practice of office-based, ambulatory anesthesia which will enable partner practitioner to "hit the ground" running in the establishment, management and marketing of a new practice.

According to Mobile's founder David Barinholtz, MD, a pioneer in the field of office-based anesthesiology and a recognized expert on the topic of patient safety in the office-based setting, "I am personally excited about the opportunity to partner with Dr. Villalobos, a physician of the highest caliber. We are looking forward to significant growth and success from Mobile of Michigan." Dr. Villalobos added, "I am committed to the office-based anesthesia concept and I am thrilled to partner with a real pioneer in this field. The preliminary requests for our services have been overwhelming."

Founded in 1996 by Dr. David Barinholtz, Mobile is a pioneer in the practice of ambulatory anesthesia continues to be the only accredited full service turnkey ambulatory anesthesia practice in the U.S.. The organization provides a comprehensive approach that teams board-certified/eligible anesthesiologists with recovery nurses who are ACLS/PALS certified to provide the safest, highest quality, most efficient, state-of-the-art anesthesia and recovery services currently available in the office-based and ambulatory setting today.

-more-

Since its inception, Mobile has capitalized on the growing demand for ambulatory anesthesia services as surgeries in the U.S. have dramatically shifted from the hospital to the physician's office. According to the SMG Group, ambulatory surgery now accounts for almost 80% of all surgical procedures performed in the U.S. with 20% of the total performed in the physician's office. In 1984, less than 500,000 procedures were performed in physician's offices, and in 2001, more than 9,000,000 such procedures were performed. Fueling this exponential growth is the fact that the delivery of medical care at alternate sites, specifically ambulatory surgery centers and physicians offices is as safe or safer than the hospital setting but significantly less expensive.

Chicago-based, Mobile Anesthesiologists is America's leading accredited turnkey office-based and ambulatory anesthesia practice. Mobile is committed to providing the safest, highest quality, state-of-the-art anesthesia and recovery services currently available in the office-based setting. The company is partnering with board-certified/eligible anesthesiologists aggressively expanding throughout the United States.
